Delivery X FAQ

Quick fixes for the most common problems on the road. Find your problem, then follow the steps in order.

Questions

1. My camera is not working

1 My camera is not working

The camera shows a black screen, does not open, or never asks to take a photo. Most of the time, this means your phone is not letting Delivery X use the camera. Work through these steps in order and stop when the camera works.

1. Give Delivery X access to your camera

When your phone asks to use the camera, tap **Allow**. If you tapped **Don't Allow** before, your phone remembers it. Turn it back on:

iPhone

1. **Open Settings.** On newer iPhones, tap **Apps** next.
2. **Tap the browser you use for Delivery X.** For example, Safari or Edge.
3. **Tap Camera.** Choose **Allow**, or turn it on.
4. **Go back to Delivery X.** Try the camera again.

Android

1. **Open Settings, then Apps.**
2. **Tap the browser you use for Delivery X.** For example, Edge or Chrome.
3. **Tap Permissions, then Camera.** Choose **Allow only while using the app**.
4. **Go back to Delivery X.** Tap the icon to the left of the web address and make sure Camera is allowed. Try the camera again.

2. Close other apps that use the camera

Only one app can use the camera at a time. Close the Camera app, video calls, and any scanner apps, then try again.

3. Reload Delivery X

Reload the page so it asks for the camera again.

BEFORE YOU RELOAD

Do not:

- ✗ reload with no signal
- ✗ reload while the green bar is showing

With no signal, the app will not run after a reload. Wait until you have Wi-Fi or cellular and the green bar is gone.

4. Restart your phone

Wait until **Packages in Queue** shows 0, then turn your phone off and on again. Open Delivery X and try the camera.

Still not working?

Contact your supervisor. Tell them your phone model and what you see when you open the camera.
